

Site Feasibility

Intralinks can help automate the end-to-end site feasibility process and provide sponsors with detailed insights to enable better site selection, leading to more effective trials that are on-time and on-budget.

Centralized Document Control

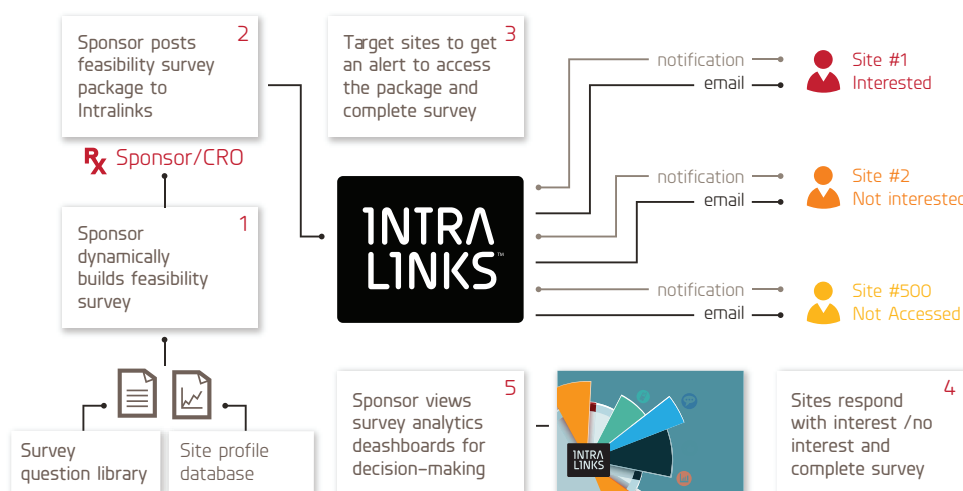

Intralinks for Site Feasibility is a secure, online location for the centralized creation, distribution, completion, collection and analysis of all site feasibility questionnaires. With Intralinks, sponsors can:

- Create, centralize, store and recall/re-use questions
- Pre-populate surveys with known site profile info for faster response/completion
- Distribute feasibility package – to all sites instantaneously
- Automatically track all site activity – access and completion progress
- Reduce errors and incompleteness of surveys by sites
- Automatically compile and synthesize completed survey data for instant analysis

Improved Site Assessment

By automating the site feasibility process within a single system, sponsors can download not only survey results but also metadata into a reporting structure in order to make detailed analysis of investigator sites. Customizable dashboards and reports allow survey completion and responses to be grouped by study, country or region, for example. Data can also be viewed by indication, therapeutic area and performance. All reports can be saved, printed and exported for ease of use.

Deeper insight into top performing sites can lead to significant cost savings across multiple studies.
