

## Intralinks Brexit Position

With the United Kingdom (UK) exiting the European Union (EU) on 31 January 2020, Intralinks has in place a number of legal measures to make sure there is minimal impact to our clients' businesses.

### These include:

-  Standard Contractual Clauses
-  Privacy Shield (updated for Brexit)

For clients who would prefer to house their files directly within the EU, Intralinks also has a data centre in Germany. Intralinks offers the option for new contracts to be located on the German Data centre.

The Intralinks platform uses a patented Distributed Content Node architecture that allows customers to specify where their files on the platform are processed and stored. Customers who wish to select this option should engage with Intralinks to discuss next steps.

### What are the benefits?

- An Intralinks Content Node deployed in Germany provides a new option for customers within the EU.
- Improved performance of common activities, such as upload and downloads, for continental Europe customers who use the German Content Node.

### What measures is Intralinks taking to protect the data of EU customers?

Intralinks has a strong track record of security, compliance and privacy within the organization. This includes the Intralinks ISO 27001 certification across all business functions and undergoing a full SOC 2 Type II audit for assurance of confidentiality, integrity and accountability.
