

Kira Diligence Engine for Law Firms:

Accelerate Contract Review, Manage Costs, Delight Clients

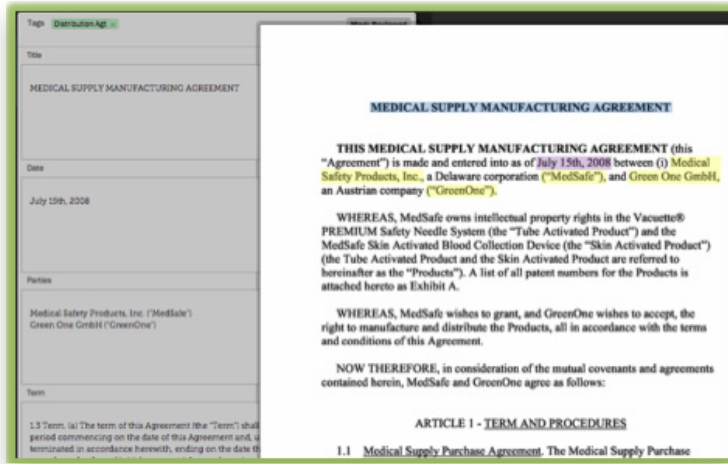

Law firms face ever-increasing pressure to provide comprehensive and accurate work product on a quick turnaround for a reasonable cost. For transactional due diligence, clients are unwilling to pay hundreds of dollars per hour for a law firm to perform a holistic review. To contain costs, companies are sending contract review to non-law firm providers, or simply asking outside counsel to scope down their work and to review only a subset of contracts. Even though almost any contract could have a problematic restrictive covenant or indemnification language, clients under cost pressure make the decision to assume that risk simply because they believe they cannot afford a more thorough review.

What if there was a way to work within budget and still review all the necessary documents at a fraction of the traditional timeframe? Would you then enable your legal team to review contracts more thoroughly in the same amount of time it would take to review a subset? How much risk would be mitigated? How much better value can you provide to your clients?

Select legal provisions to extract from contract/agreement.

Trusted on over \$70 billion of transactions since 2014, Kira Diligence Engine helps close deals faster while mitigating risk of errors and unexpected liabilities. Kira’s customers include some of the world’s largest corporations and professional services firms. They report that they complete their contract review and analysis in 20-90% less time and with fewer misses than with manual review. By reviewing more risks in more contracts in less time, Kira users provide better value to their clients by providing a comprehensive, full-spectrum view of all potential risks and exposures.

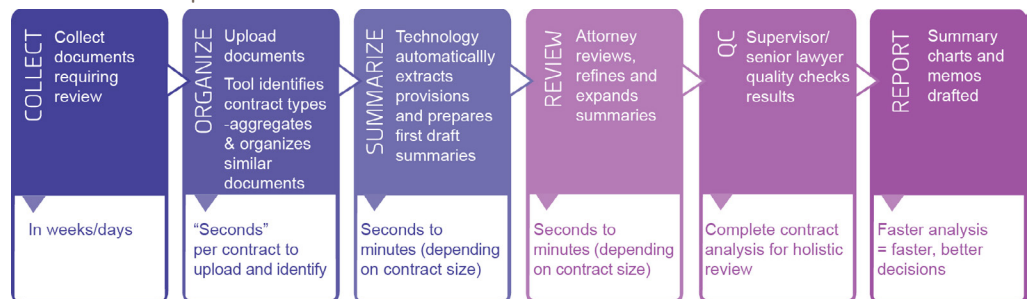

View auto-highlighted selected provisions in the source documents. Highlight sections of the document to teach the platform a meaning of a new custom provision.

How does it work? Kira uses highly customized machine learning algorithms that have been trained by experienced lawyers to automatically identify and extract the contract provisions most commonly reviewed during due diligence. Using Kira Quick Study, you can also teach Diligence Engine Kira to recognize additional provisions. There is virtually no contract risk that Kira can't help uncover.
