

DealCentre Connect Secure Gateway*

Secure AI connectivity for modern dealmaking

AI has become a strategic imperative for today's dealmakers — but most AI tools still require deal teams to download sensitive documents from virtual data rooms and upload them to external systems.

This introduces real risk:

- Confidential information leaves the controlled deal environment
- Permissions, access controls and audit trails break down
- Client trust and regulatory standing can be jeopardized

Introducing DealCentre Secure Gateway

A secure integration layer that allows external AI applications to interact directly with live deal data inside DealCentre AI via Model Context Protocol (MCP) and secure APIs.

Secure, seamless, audited access to deals from external AI tools like Claude.

I've got to finish some due diligence this evening. Show me the deals I'm working on.

Open SS&C Project ↗

You've got two active deals:

Project Synthetic — a Corporate Divestiture (Advisor), currently live and last updated just a few days ago on May 8.

SS&C Project — a Financing deal (Advisor), in started status, last touched in March.

Click either card to dive in and I'll pull up the data room contents and help you prioritize what to review tonight. Which one are you focused on?

Why use DealCentre Connect?

✓ Secure gateway for your preferred AI tools

- Keep AI tools inside DealCentre's security perimeter
- Enforce existing permissions and access controls
- Keep sensitive documents in the data room

✓ AI speed meets bank-grade security

- Query deal documents across data rooms
- Ask diligence questions in natural language
- Analyze materials without exporting files

✓ Built-in governance and control

- Audit every AI action by user identity
- Manage AI app access by deal
- Maintain transparency and control throughout

* DealCentre Connect Secure Gateway is currently in Controlled Availability

Core value for dealmakers

Think inside the deal

DealCentre Connect allows AI to reason across deal materials where they live, across documents, folders and Q&A exchanges — without side channels or downloads.

Why this matters

- You're always working from the most current information
- No uncertainty about source or completeness
- Faster insight without added operational risk

AI innovation without data exposure

DealCentre Connect inherits and enforces DealCentre's security model, ensuring:

- Deal-scoped access with least privilege
- No uncontrolled data egress
- Full auditability of AI interactions
- Data remains within the DealCentre environment

Why this matters

Deal teams can confidently leverage AI — without compromising client trust or compliance posture.

Secure, seamless and agent-ready

DealCentre already includes Link, our proprietary, purpose-built AI engine. With MCP access, external AI tools can operate safely alongside our built in intelligence, enhancing insight while remaining fully governed.

Why this matters

DealCentre supports organizations at every stage of AI maturity, from first-time users to advanced, AI-enabled deal teams.

Dramatic token efficiency savings

When an external AI delegates to Link rather than processing raw documents itself, it sends a structured request and receives a precise, pre-analyzed result, consuming less tokens than full document ingestion requires.

Why this matters

Organizations can scale AI usage more cost-effectively, accelerate analysis across high-volume deals and drive efficiency without increasing operational complexity.
