SS&C Intralinks VIA™ Pro

Secure collaboration without added complexity

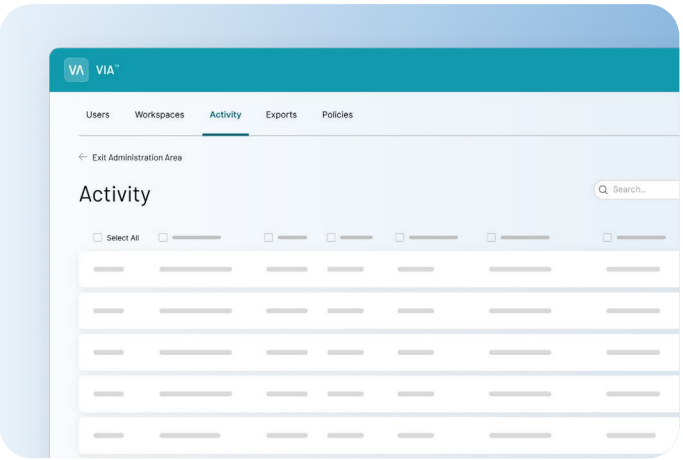
Many organizations still manage sensitive collaboration across email threads, shared drives and disconnected tools, creating security and governance risks, information silos and challenges in maintaining a single source of truth across projects.

SS&C Intralinks VIA Pro provides a centralized, secure workspace where teams can collaborate, manage projects and exchange sensitive information with confidence — all while maintaining visibility, governance and control throughout the collaboration life cycle.

What is Intralinks VIA Pro?

Intralinks VIA Pro helps organizations streamline secure collaboration by bringing users, content and activity together in a centralized workspace.

Whether you're coordinating large file transfers, collaborating with external stakeholders or managing ongoing projects, VIA Pro simplifies secure information sharing while helping teams stay organized, productive and in control.



How VIA Pro supports your team

Centralized workspace management

Manage projects, users and collaboration from a single, secure environment, with centralized visibility across workspaces and activity.

Secure file sharing

Confidently share sensitive information using enterprise-grade security and structured workspaces built for both internal and external collaboration.

Visibility and oversight

Monitor user access and activity to maintain greater oversight and control across projects and teams.

Simplified administration

Reduce administrative effort with centralized user, permission and workspace management.

Mobile and cross-device access

Enable teams to securely access content, collaborate and stay productive from virtually anywhere.
