

### Intralinks Al Redaction Scan, review, redact. Done.

## Protect your data with an intelligent redaction assistant.

Document redaction is a critical part of deal preparation. Unintentional exposure of personally identifiable information (PII), key contract provisions, customer names and other sensitive data could irreparably harm your deal and your reputation.

The traditional approach to redaction is time-consuming and prone to errors. Standalone software can help, but those tools are largely manual, taking time and considerable expense, even when outsourced. Plus, maintaining multiple versions of a document can challenge your workflow and VDR integrity.

Intralinks AI Redaction feature in **VDR**Pro<sup>™</sup> transforms the way you redact critical deal documents and gets you to due diligence faster.

Our redaction engine uses artificial intelligence to identify common data elements like names, addresses, and other PII. Users can add customized terms and then initiate redaction across a set of documents, all from within **VDR**Pro<sup>™</sup>. Documents can be queued for review and automatically replace the source document, once approved. As the deal matures, documents can be easily re-opened to adjust the redaction criteria or reverted back to their original form – all with the click of a button.

# Deal data security has never been easier.

**VDR**Pro<sup>™</sup>'s Al Redaction feature streamlines your workflow and protects your most sensitive data – all with assistance from our advanced Al engine.
