# Protect Your Data with Industry-Leading Security

Fully validated and now with ISO 27701 certification.

CLEAR ADVANTAGE.

# At Intralinks, your security is our business

Our mission is to protect your deal and its data through an ecosystem that's focused on security for you, your customers and your partners.

Our dedicated security teams — IT security professionals, lawyers and auditors — empower you to leverage our technology with complete control, privacy and confidence.

Benefit from world-class security and compliance best practices across all Intralinks people, processes, policies and supporting infrastructure.

# Security is at the heart of what we do

## World-class security from an award-winning company

**First in Industry**

### Process

- 24/7 continual security assessment and monitoring on production instances

- Formal Secure Development Lifecycle with automated security analysis for all our products and services

- Weekly vulnerability scans of production infrastructure

- Security Issue Management process to manage all reported issues from customer and internal audits, penetration tests and vulnerability notifications

- Advanced security-management tools to stage and upload files

- Archive copy of customer data delivered on-demand, encrypted online or on media

- Store and process data within a specific geography in order to comply with data privacy laws

### Infrastructure

- Multi-layer infrastructure defenses including Web Application Firewall against data-tampering attacks

- Building Security-In Maturity Model (BSIMM) framework with integrated software security checkpoints and activities

- Dedicated security-testing environment for customers

- End-to-end encryption

- GDPR compliant

### Security Experts

- The first VDR provider with ISO-27701 certification

- Industry-specific certifications

- Trained and certified security champions in each development team

- Our security, privacy and compliance professionals work with customers to successfully pass internal and regulatory reviews

# Built in—not bolted on

## Never worry about security or privacy with Intralinks data rooms

### Role-based Security

- Control access to folder structure and manage document changes
- Group-based permissioning for ease of use and speedy VDR launch
- Buyers cannot see other buyers within the VDR
- Buyers can only see documents that they've been permissioned to view
- Full user-activity log for both buy-side and sell-side teams
- Unique username and password along with strong authentication
- Validation checks to prevent buyers from being added to the wrong buyer group
- Three-step VDR phases to prevent buyers from gaining access to the VDR while the seller is still in preparation mode
- Dynamic capability that allows buyers to perform offline manipulations on protected Excel® files
- Optional two-step permission-approval process

### Document-based Security

- Choose document-level or folder-level permissioning to suit the deal
- Permission/protection grid to easily assign and control VDR-wide folder and document security levels
- Advanced document security ensures locking of document to protect against copy-paste, printing and downloading
- Dynamic watermarking applied at the VDR level to holistically embed customers' email IDs and download time stamps to documents

### Since 2015

over 48,000 new users registered monthly on the Intralinks platform

### 450+

client-led audits and application penetration tests

### 1,000+

security inquiries monitored every year

### 24/7/365 Worldwide

assist services for deal teams, global operations and security teams

# Security at all levels

## Keeping data secure requires a multi-channel approach

**File Security**

Lock down, control and protect files wherever they reside to secure the flow of information.

**Platform Security**

Secure data against external threats and meet security and architecture requirements across the enterprise.

**Operational Security**

Our Governance, Risk and Compliance team works with customers to provide ISO and SOC2 certification reports and other artifacts necessary to maintain Intralinks' approved vendor status during the lifetime of the relationship.
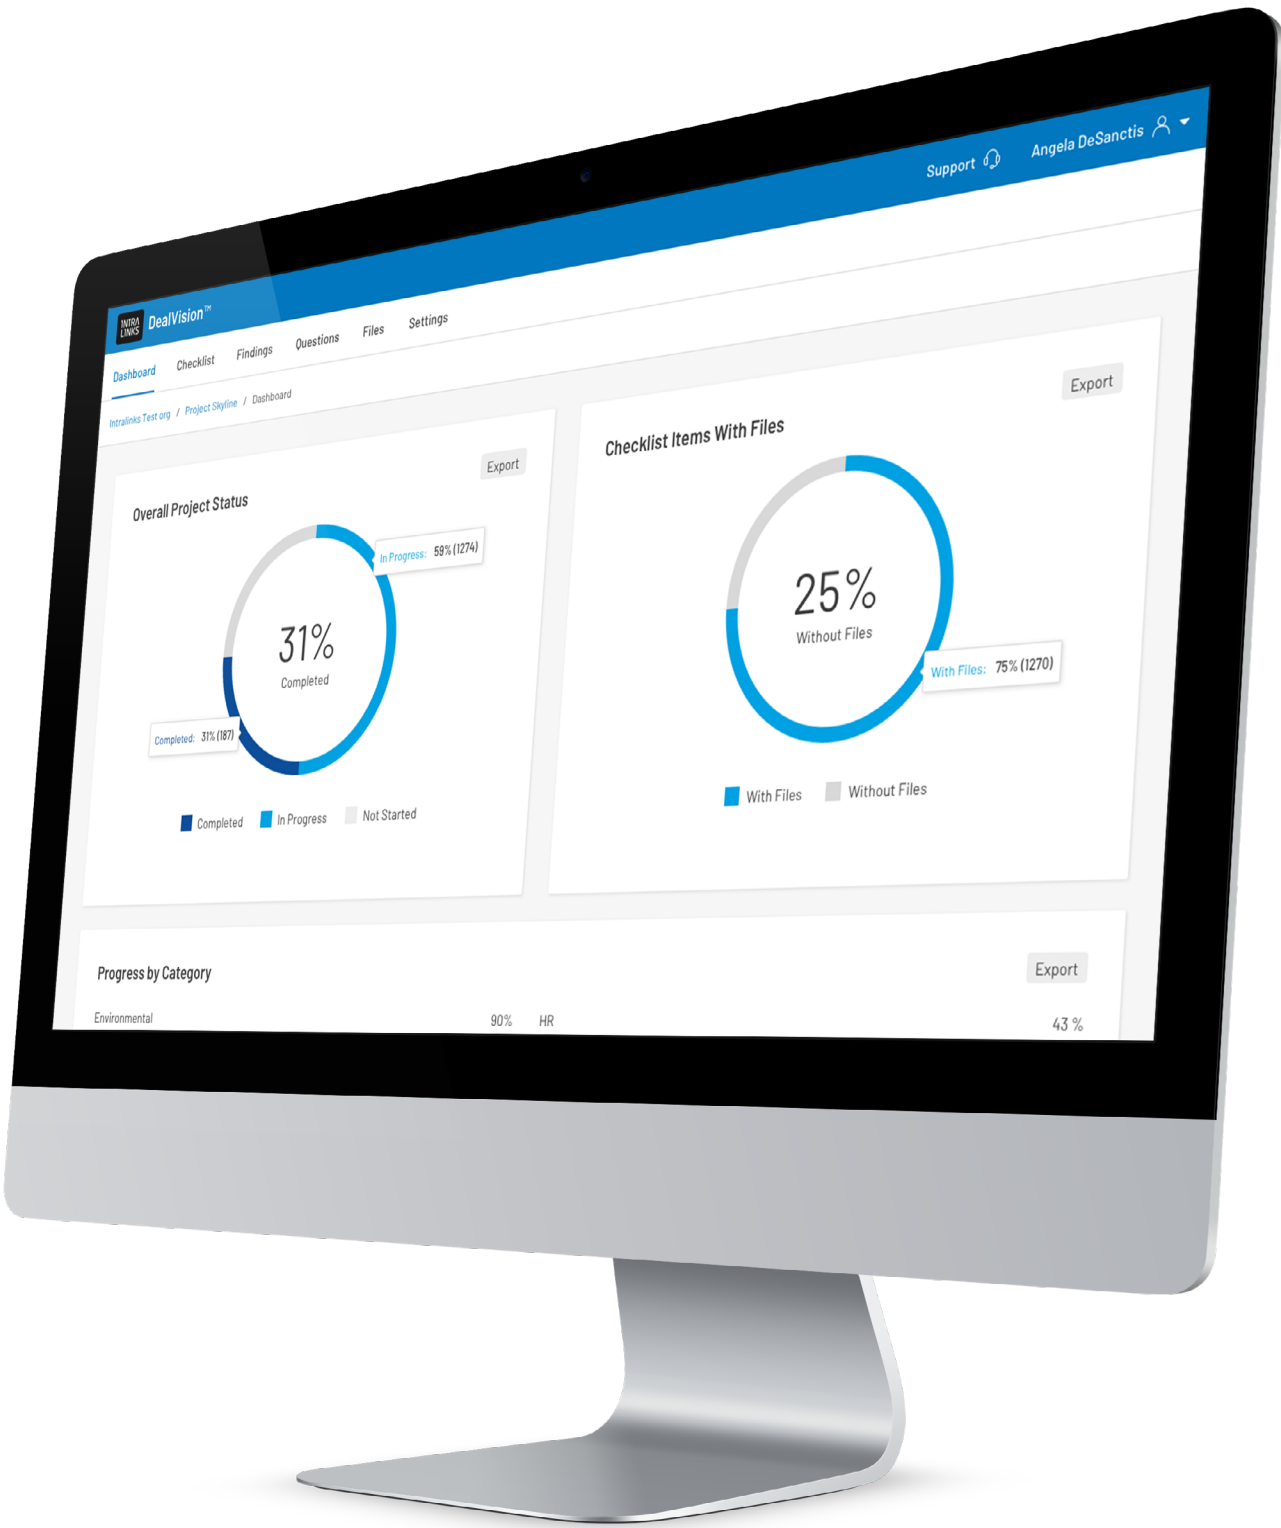

**Application Security**

Secure, control and track information through roles, granular permissions and auditable workspaces.
