

Zoom Integration for SS&C Intralinks

Capture your video recordings in your Intralinks portal – in just a few clicks

The remote work environment has become the new normal across organizations. As a result, fund managers are increasingly turning to video to enhance their fundraising, investor communication and ODD processes and are seeking tools to support how they securely share these files.

Fund managers have been significantly impacted by the new environment, as many of their meetings typically conducted during the fundraising and ODD process require in-person attendance. LPs know that not all information can be communicated through static files – and with in-person interaction no longer an option for many, GPs are starting to utilize video more heavily to augment their traditional processes.

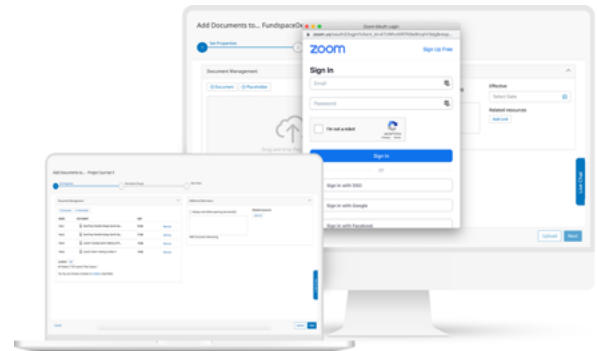

Traditional meetings, such as management presentations, AGMs, and ODD site visits, are now conducted entirely on web conferencing platforms such as Zoom. To distribute these video assets at scale – and in a secure fashion – fund managers need a platform where access can be controlled and monitored.

Intralinks now offers a direct integration with Zoom.

With Intralinks' newly released direct integration with Zoom, IR teams can:

- Upload Zoom videos directly onto an integrated, secure portal
- Seamlessly store and stream filmed material such as due diligence reviews, management presentations, AGMs, and Q&A with key stakeholders
- Protect sensitive content from being shared inappropriately (restrict downloading and forwarding videos)

Thanks to virtual platforms like Zoom and Intralinks, fund managers are finding smarter ways to share content to their global investor community – from video meetings and investor meetings to virtual AGMs. Discover the power of next generation technology.

The already fast-paced capital raising and investor communications environment is changing rapidly.

Learn how Intralinks can provide you with resources to power your virtual IR needs.
