

Zoom Integration for SS&C Intralinks

Capture your video recordings in an Intralinks VDR – in just a few clicks

The remote work environment has become the new normal across organizations. As a result, M&A practitioners are increasingly turning to video to enhance their due diligence processes and are seeking tools to support how they securely share these files.

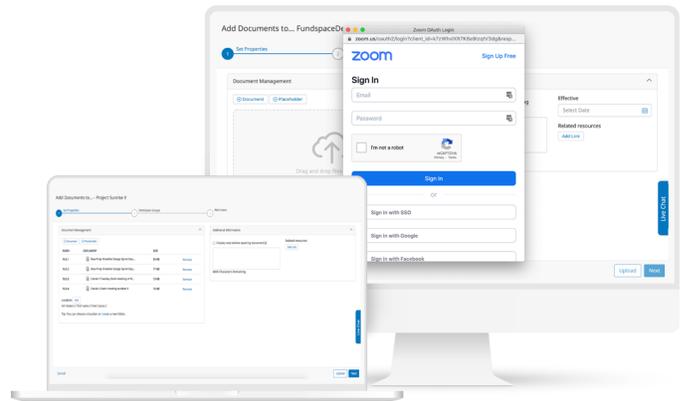

M&A dealmakers have been significantly impacted by the new environment, as many of their meetings typically conducted during the deal evaluation and execution process require in-person attendance. Sellers know that not all due diligence information can be communicated through static files – and with in-person interaction no longer an option for many, deal teams are starting to utilize video more heavily to augment their traditional due diligence processes.

Traditional meetings, such as management presentations and site visits, are now conducted entirely on web conferencing platforms such as Zoom; but conducting individual sessions for each potential buyer can be a time-consuming exercise and can interrupt the deal timeline. To distribute these video assets at scale – and in a secure fashion – sellers and their advisors need a secure platform where access can be controlled and monitored.

Intralinks now offers a direct integration with Zoom.

With Intralinks' newly released direct integration with Zoom, you can seamlessly upload videos like facility tours, operational due diligence reviews, management presentations, and Q&A with key stakeholders to your VDR in seconds – all within your data room.

Thanks to virtual platforms like Zoom and Intralinks, deal teams are adapting to the remote due diligence process and are finding creative solutions to keep deals moving in this evolving climate

The already fast-paced dealmaking environment is changing rapidly.

Learn how Intralinks can provide you with resources to power remote due diligence.
